

IADC WELLSHARP™ DRILLING

Driller Level

The Driller Level course is designed for personnel that have responsibility for detecting a kick and shutting in the well. This course focuses specifically on the driller's primary responsibilities rather than on advanced calculations and well control methods.

Designed for front-line drilling personnel, it is focused on the essential skills of early kick detection and well shut-in procedures. This focused approach ensures they master their primary responsibilities without being overwhelmed by complex theoretical concepts.

Participants will gain a deep understanding of the skills that are critical for preventing well control incidents and for responding to any unexpected well events.

Workover & Completion Supplement

Designed to supplement the Drilling Operations' Driller Level course, this core curriculum teaches the additional well control knowledge and job skills needed by drilling personnel who may be engaged in completion and workover operations.
