

# e-LEARNING COURSES

The IADC has transitioned all the WellCAP Supervisor and Fundamental Well Servicing courses to instructor-led WellSharp. **WCS will continue to offer the approved IADC and IWCF e-Learning courses as well as the WCS accredited courses.**

## System 21 e-Learning

The WCS System 21 e-Learning courses are enhanced with material that goes beyond the requirements of most accredited well control training courses; offering the highest level of training, testing, simulation, and overall measurement of employee competence in well control. The interactive tasks and role-playing familiarize learners with well control concepts, emphasizing correct procedures and teamwork, while computer graphics dramatically depict downhole conditions, such as deepwater or horizontal drilling. Course content and reports generated by System 21 also help companies conform to the standards set forth by ISO 9001, addressing training, record keeping and quality audits.

## e-Learning Courses Available

### IWCF Level 2

- Drilling Surface (web-based only)
- Drilling Surface/Subsea (web-based only)

### IADC Introductory Level

- WellCAP Coiled Tubing, Snubbing, Wireline Surface (computer & web-based)
