

DRILLING SUPERVISION

Through an alliance agreement with Drilbert Engineering Inc., the Well Control School is offering the Drilling Supervision Course. This 5-day course blends interpersonal and technical skills together to help students understand their role as a supervisor. Emphasis is placed on professional behavior and work ethics. A variety of technical topics that a Drilling Supervisor should be proficient in are presented. Interpersonal skills are presented in conjunction with the technical topics. The technical topics are used as a vehicle to deliver the leadership principles.

Learning Objectives:

1. Understand the role of drilling supervision.
2. Improve the professionalism and work ethic of everyone in his crew.
3. Improve his problem solving and decision-making capabilities.
4. Manage conflicts while becoming more influential in his company.
5. Develop a deeper understanding of the basic technical disciplines a drilling supervisor should master.
6. Build confidence by improving his technical and interpersonal competence, as well as his professional ethics.

Target Audience:

- Drillers, Rig Managers, Tool Pushers, Drilling Superintendents, Drilling Supervisors
- Rig and office based personnel
- Drilling engineers
- Students

Course Duration: 5 days
